

What is an AI Agent?

An AI agent is a smart digital assistant that can think, reason, plan, and take action – just like a proactive employee.

The most advanced AI agents go beyond static automation – they can solve problems they've never seen before.

Agents vs. Automation

 Automation is like a to-do list. It follows fixed steps:
 $A \rightarrow B \rightarrow C$. No thinking involved.

Example of automation:

Every day at 7 AM, check the weather, summarize it using ChatGPT and send it by email.

Agents vs. Automation

AI agents are flexible and dynamic– they don't just follow instructions, they decide what to do.

AI agents can reason, make decisions, and adapt their actions based on the context. It's like giving your automation a brain that thinks before it acts.

Core Components of Every AI Agent

Core Components of Every AI Agent

- 1  Brain (LLM)
- 2  Memory – Context That Sticks
- 3  Tools – How the Agent Acts in the World

Core Components of Every AI Agent

- 1  Brain (LLM)
- 2  Memory – Context That Sticks
- 3  Tools – How the Agent Acts in the World

Workflow: trigger → AI Agent → tools → output.

Core Components of Every AI Agent

1 Brain (LLM)

This is the core intelligence that handles natural language understanding, reasoning, planning and decision-making.

Core Components of Every AI Agent

- 1  Brain (LLM)
- 2  Memory – Context That Sticks

Memory allows the agent to remember what just happened—and what happened before that.

Some agents just use short-term memory, while others use long-term memory, stored in external documents or vector databases.

Core Components of Every AI Agent

- 1  Brain (LLM)
- 2  Memory – Context That Sticks
- 3  Tools – How the Agent Acts in the World

Tools are how agents take action.

Agents use tools to interact with the world around them.

Core Components of Every AI Agent

- 1  Brain (LLM)
- 2  Memory – Context That Sticks
- 3  Tools – How the Agent Acts in the World

A prompt tells the agent what role to play, how to respond, and what kind of personality to use.
